ART VISION

The NFTs are a combination of animation elements and static images **produced with artificial intelligence but retouched by humans** on digital tools.

The color palette, artistic technique and full concept is inspired on **dystopic and cyberpunk aesthetics**. It blends futuristic lines of minimalism, chaotic sad worlds and hyper realistic characters with a frozen deep look.

The combination of mass production art is well landed with replicable traits around the NFT concept, giving the final work a **cohesion of logic and measurable value**.

This NFT solves the problem of non linear NFT collections produced with just artificial intelligence mechanisms that just rely on human appreciation and external utility to produce their value.

At the same time, these NFTs create an exceptional opportunity for collections inside collections based on unipersonal art preference, groups of traits, storyline non meta traits and engraved meta rarity.

Holders will find themselves trying to catch the main characters when focusing just on the storyline (non meta traits), but will also seek to collect the rare meta traits or try to hold on to the characters with which they feel identified no matter the story or traits.

The characters are based on thousands of facial features extracted from worldwide fashion, music, cultural and political personalities. This was done to produce faces with familiar details and symmetrical physiognomies, trying to give our holders something they already know but presented with a futuristic and unique make up, just like on movies.

Finally, the animations are designed to give some sense of movement without being invasive to the main piece of art, just like the HUD in most first person games. This is aimed to generate an **immersive experience** for the end viewer.

UTILITY VISION

The Assimovs are aimed to become longevity pieces of an **entire universe of collections based on the same storyline.**

Just like seasons of streaming series, movies with sequels or chapters of a book, Assimovs are just the preface for the entire story that will unfold little by little. The collection will then have an aggregated value for being the first sneak peek to the full universe.

We're looking to produce the story of Assimovs telling the it within **launching collections that can give more background each time.**

NFT collections dedicated to one or more of the main characters, NFT collections related to the maps, locations and real state of the story, NFT collections based on plot with **Machine, Genetic Blocks, Quantum Chain, and the Aftermath conflict.**

With this longrun view for the universe of Assimovs, these pieces will be the entrance, the Whitelist, the Mint Pass, the Proof, the key... not just on XRPL but also on other blockchains.

Apart from the native utility of the Assimov universe, we're also aiming to give (like all our NFTs) utility within our "**crypto tribe**" with special channels, roles, tools, giveaways and mechanisms inside our digital platforms like **mainstream** server, Telegram, Reddit and more to come.

Because Assimov universe can be a powerful force for fandom, on the long run we're also looking to push the boundaries of our crypto endeavour to reach **consumer products, merchandise, gaming, licensing, music and shortfilm production.**

These first collectibles will also serve as the entrance to all this world of mainstream capital and economic movement.

THE ASSIMOV NFT

This is a XLS-20 XRPL NFT collection presenting the **m**eta block analysis of various **m** Citizens from all around the universe.

machine has stored in its Quantum**m**chain a different file for each citizen. Because of new ways of reproduction, there are many citizens that look totally the same, but by reading the file you can get the tiny details that give each living being it's own identity. On this file you're able to read publicly the type of genetic material each person holds, their profession, their score on the society, the type of humanity they have and their current government flags. The file has a **m**ETAHUD with all this information.

THE n HUD

UNIVERSE LOCATION

Our artists are using 48 different A.I made locations, some of them scrapped from big data files, others originally produced and others extracted from open source archives but retouched to give them originality.

All these places are based on the storyline of Assimovs and **give you a tiny fragment of information of where the story is heading.**

On this collection you'll see the backgrounds of iconic places of the story like the main stage of **m** City, the capital of **m**etaverse where a rebel group of hackers developed a copy of **m** Reactor, the tool to change the code on Quantum**m**chain blocks of information, gaining control of the perfect and "immutable" reproduction of living beings.

You'll also be able to find more compact scenerios that show you the daily life of **m** Citizens around their different professions and journeys.

The background locations also unveil details about **problems on the society like poverty, inequality of resources, income and conditions of the origin planet, "the earth".**

All places have a different story, context and reason. There's some forced logic placement of some locations with some of the characters but most of them are just part of the random compilation of the NFTs

Ϡ GEN5

Living beings on this era, year 2,222 A.S, are reproduced by artificial intelligence using encrypted genetic material inside Ϡ Blocks. **This genetic material can produce not just humans, but also cyborgs and droids...and maybe something more.** Each Ϡ Gen is carrying transactional data from all the ancestors, but because the QuantumϠchain is decentralized, some living beings look the same although they are not. The only way to know and identify someone as unique is by looking at the Ϡ Gen. There's no possible way of duplicating the Ϡmetadata of a living being. Just Ϡmachine knows how to decrypt all the transactional data that each Ϡ Gen is carrying. Government law does not allow you to read it because of universal security, so you can see the Ϡ Gen of someone but there's no possible way of decrypting or reading the code.... or is there?

32 DIFFERENT GENS : 1 ERROR CODE?

ERROR!

ϠGen111

THE **ᄎ** CITIZENS

On **ᄎ** Society, all living intelligent beings are considered citizens of humanity. Although some organisms have a mechanical precedence or an hybrid construction of organic material and mechanical parts (like droids), all are equally treated by **ᄎ** as part of the human race.

At some point around 2,000 in After Satoshi era, organic humans started merging with robots. That was only possible because of ᄎ Gens are carrying all the genetic human information that can be transferable to bots. That is how "**droids**" were born. These are just part humans and part robots. Sometimes the brain is human, but the organs are mechanical, some others the opposite happens. There's no way to control how droids are born, it is just a natural thing that **ᄎ** machine produces.

Because in the robotic mechanical world there's also some discrimination to organic humans, then some old school conservative bots have tried to maintain their genetics intact and not merge with the organic beings. This is why **pure cyborgs still exist**, most of them are racist to pure humans and because of their natural advantages, they are also more skilled on intelligence demanding jobs.

The same way bots discriminate organic beings, there are groups of orthodox humans that have just stayed the same within the passing of time. They just breed with their own race. That's why **pure humans still exist**.

MAIN CHARACTERS

SNEAK PEEK 1.0

Whole plot has around 36 characters with storyline intervention. There are 25 main characters that build an **engaging narrative** about resetting η machine, killing the Assimovs and finding out the truth about their transactional gen history. **Each one of the main characters has a full background storyline.**

HUMAN

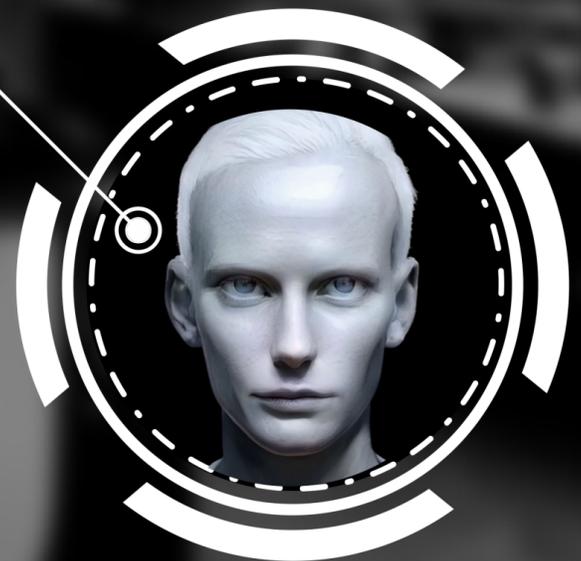

PROGENY OF NANAYA

Nanaya 237 is helping Isaac with the amendment of η Blocks. They found out a glitch on the Quantum η chain was producing Assimovs.

ASSIMOV

PROGENY OF UANNA

Arman was born different, no one knows why but η machine has never been able to read his η Block. He is now commanding the rebellion complot against Senate City.

CYBORG

PROGENY OF ETANA

Etana 873 is the commander in chief of hunter forces. She's pushing some senators to declare Assimovs as a η metaverse security issue and reset η machine to it's origin.

ጢ CITIZENS / THE PROGENIES

SNEAK PEEK 1.0

The humanity reproduction system is controlled by artificial intelligence and humans don't breed with sexual reproduction since almost 1,000 years ago.

Although living beings choose their partners, **reproduction is not a couple's decision anymore, it is a mandate for citizenship, just like paying taxes.** The reproductive system consists on staking the ጢ Gen into a ጢ machine pool. It is a transactional reproduction system where artificial intelligence grabs the information of 2 different ጢ Gens and creates a new code that is also engraved into the Quantumጢchain. **After that, the new living being is implanted on the womb of a pure human being, those humans are called "breeders".** Cyborgs, Droids and Humans are raised by them and then delivered to society to start their assigned social roles as part of the humanity. **Every citizen is able to know the name of their breeder and progenitor, but they don't know their real parents.**

+ 150 CITIZENS

Each one of them with a different progenitor and different look. Some citizens may look the same because they come from the same progenitor but they are different living beings, with different gens, locations, society roles and social credit.

+ 25 1/3 CITIZENS

Main characters are also in the collection but they are just repeated 2 or 3 times and you'll know because hud shows the same data but different locations.

CYBORGS

HUMANS

DROIDS

BREEDERS

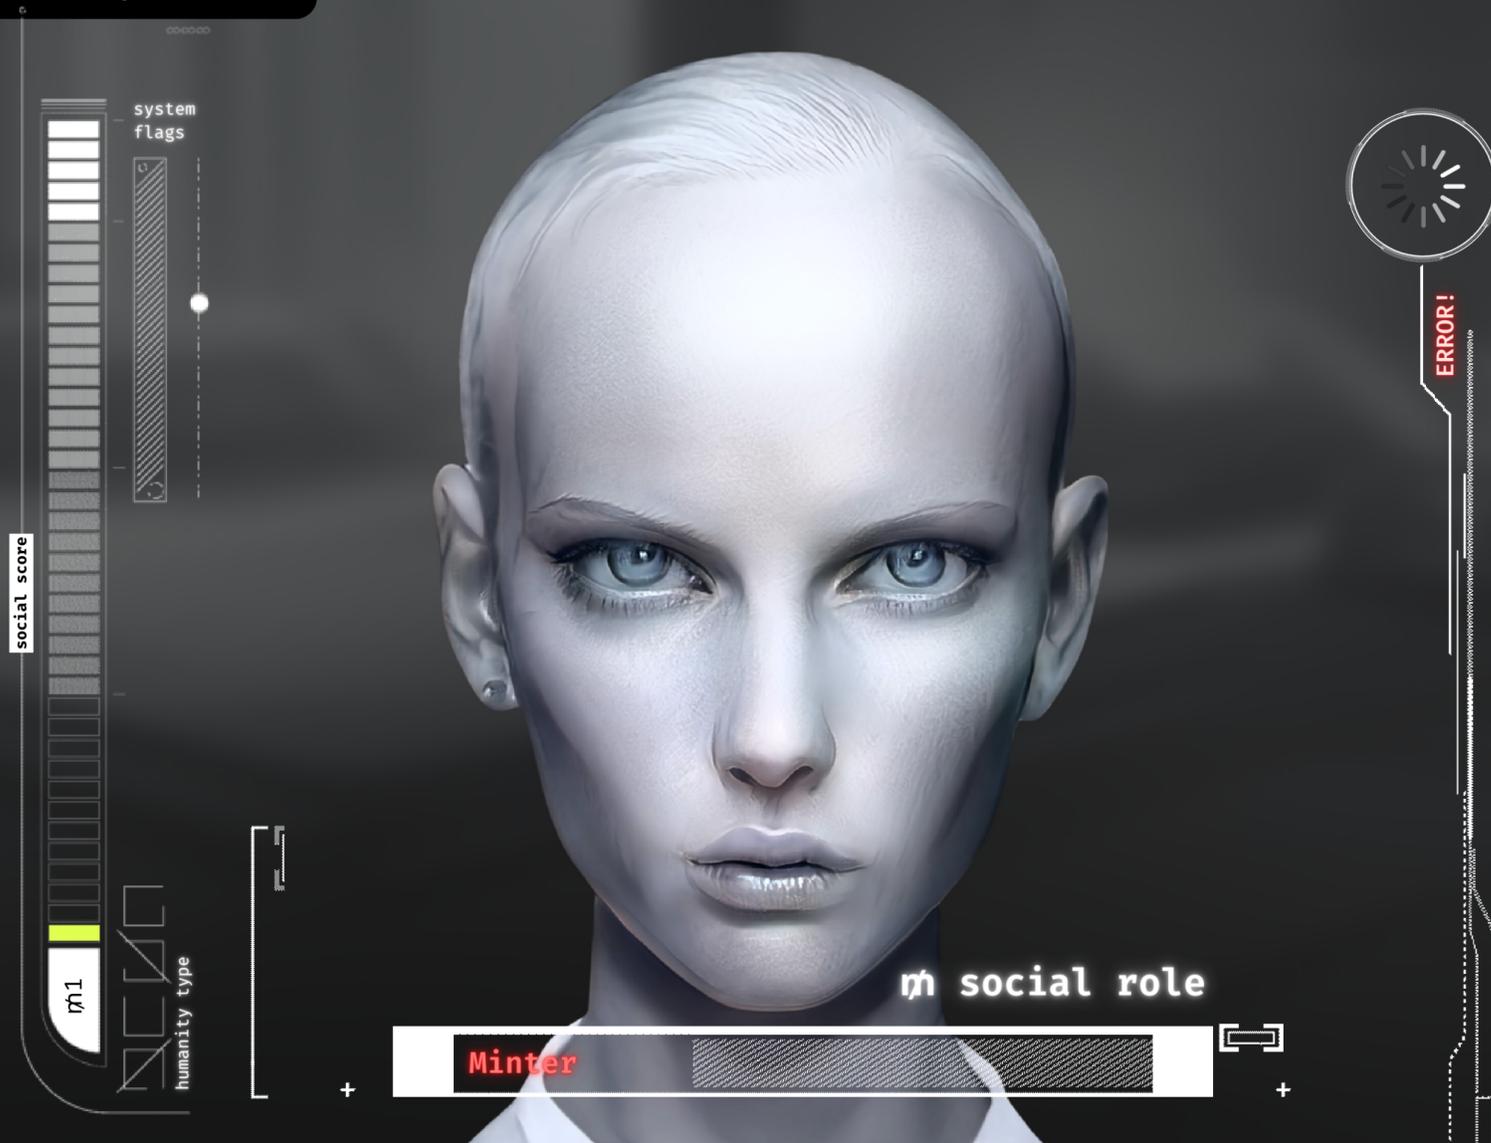

THE ASSIMOV'S

During all the After Satoshi era, **m**achine has been classifying living beings into these humanity categories (humans, droids, cyborgs). But something happened not many years ago. Some citizens began to be born with a different schema structure on their **m** Gens. **At first, machine was killing them** but because massive reproduction is taken place all around the **m**etaverse, some of them escaped the breeding lands and integrated themselves into the society. Not many citizens know about them, but they exist. Some citizens call them **"Assimovs", that's the rumor.**

it is very difficult for them to be integrated, have a job or just find a partner because when you try reading their **m** Block, system throws an error. **m**achine doesn't understand the genetic code and can't register them on the Quantum**m**chain. Senate is starting to recognize them and acknowledge their existence but...it was supposed that **m**achine was perfect.

What are these new living beings? Are they different? How many are there? What to do with them? What happened to the perfection of **m**achine? And most important, **Quantum**m**chain was just unbreakable right? So who changed the schema?** 2 scientists that are studying this case started to call them "Assimovs" because they have something pure on their genetic material, their genetic material is fungible and that is not allowed by the Quantum**m**chain.
